CHALLENGE

Measure and Understand the impact and the credibility of the various French audiovisual channels with their audiences ?

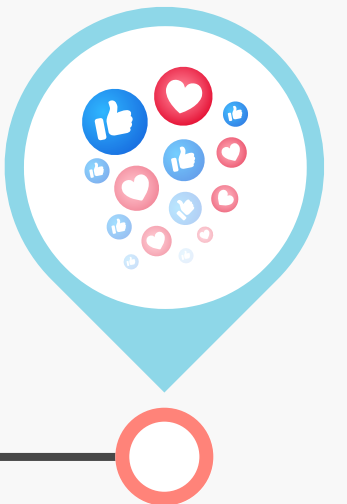

OBJECTIVES :

To measure the audience reach of different French audiovisual channels.

To analyze the perceived credibility of these channels among viewers.

To identify which themes and programs attract higher trust and engagement.

EXPLORATORY ANALYSIS

01 DATA IMPORT AND CLEAN-UP

Load different data sets (Excel with multiple sheets).
Format conversion (e.g., transforming HH:MM:SS times into minutes).
Handle missing or incorrect values (NaN, "nd", empty values).
Standardize data types (float, int).

02 UNIVARIATE ANALYSIS

Boxplots to detect extreme values (outliers).

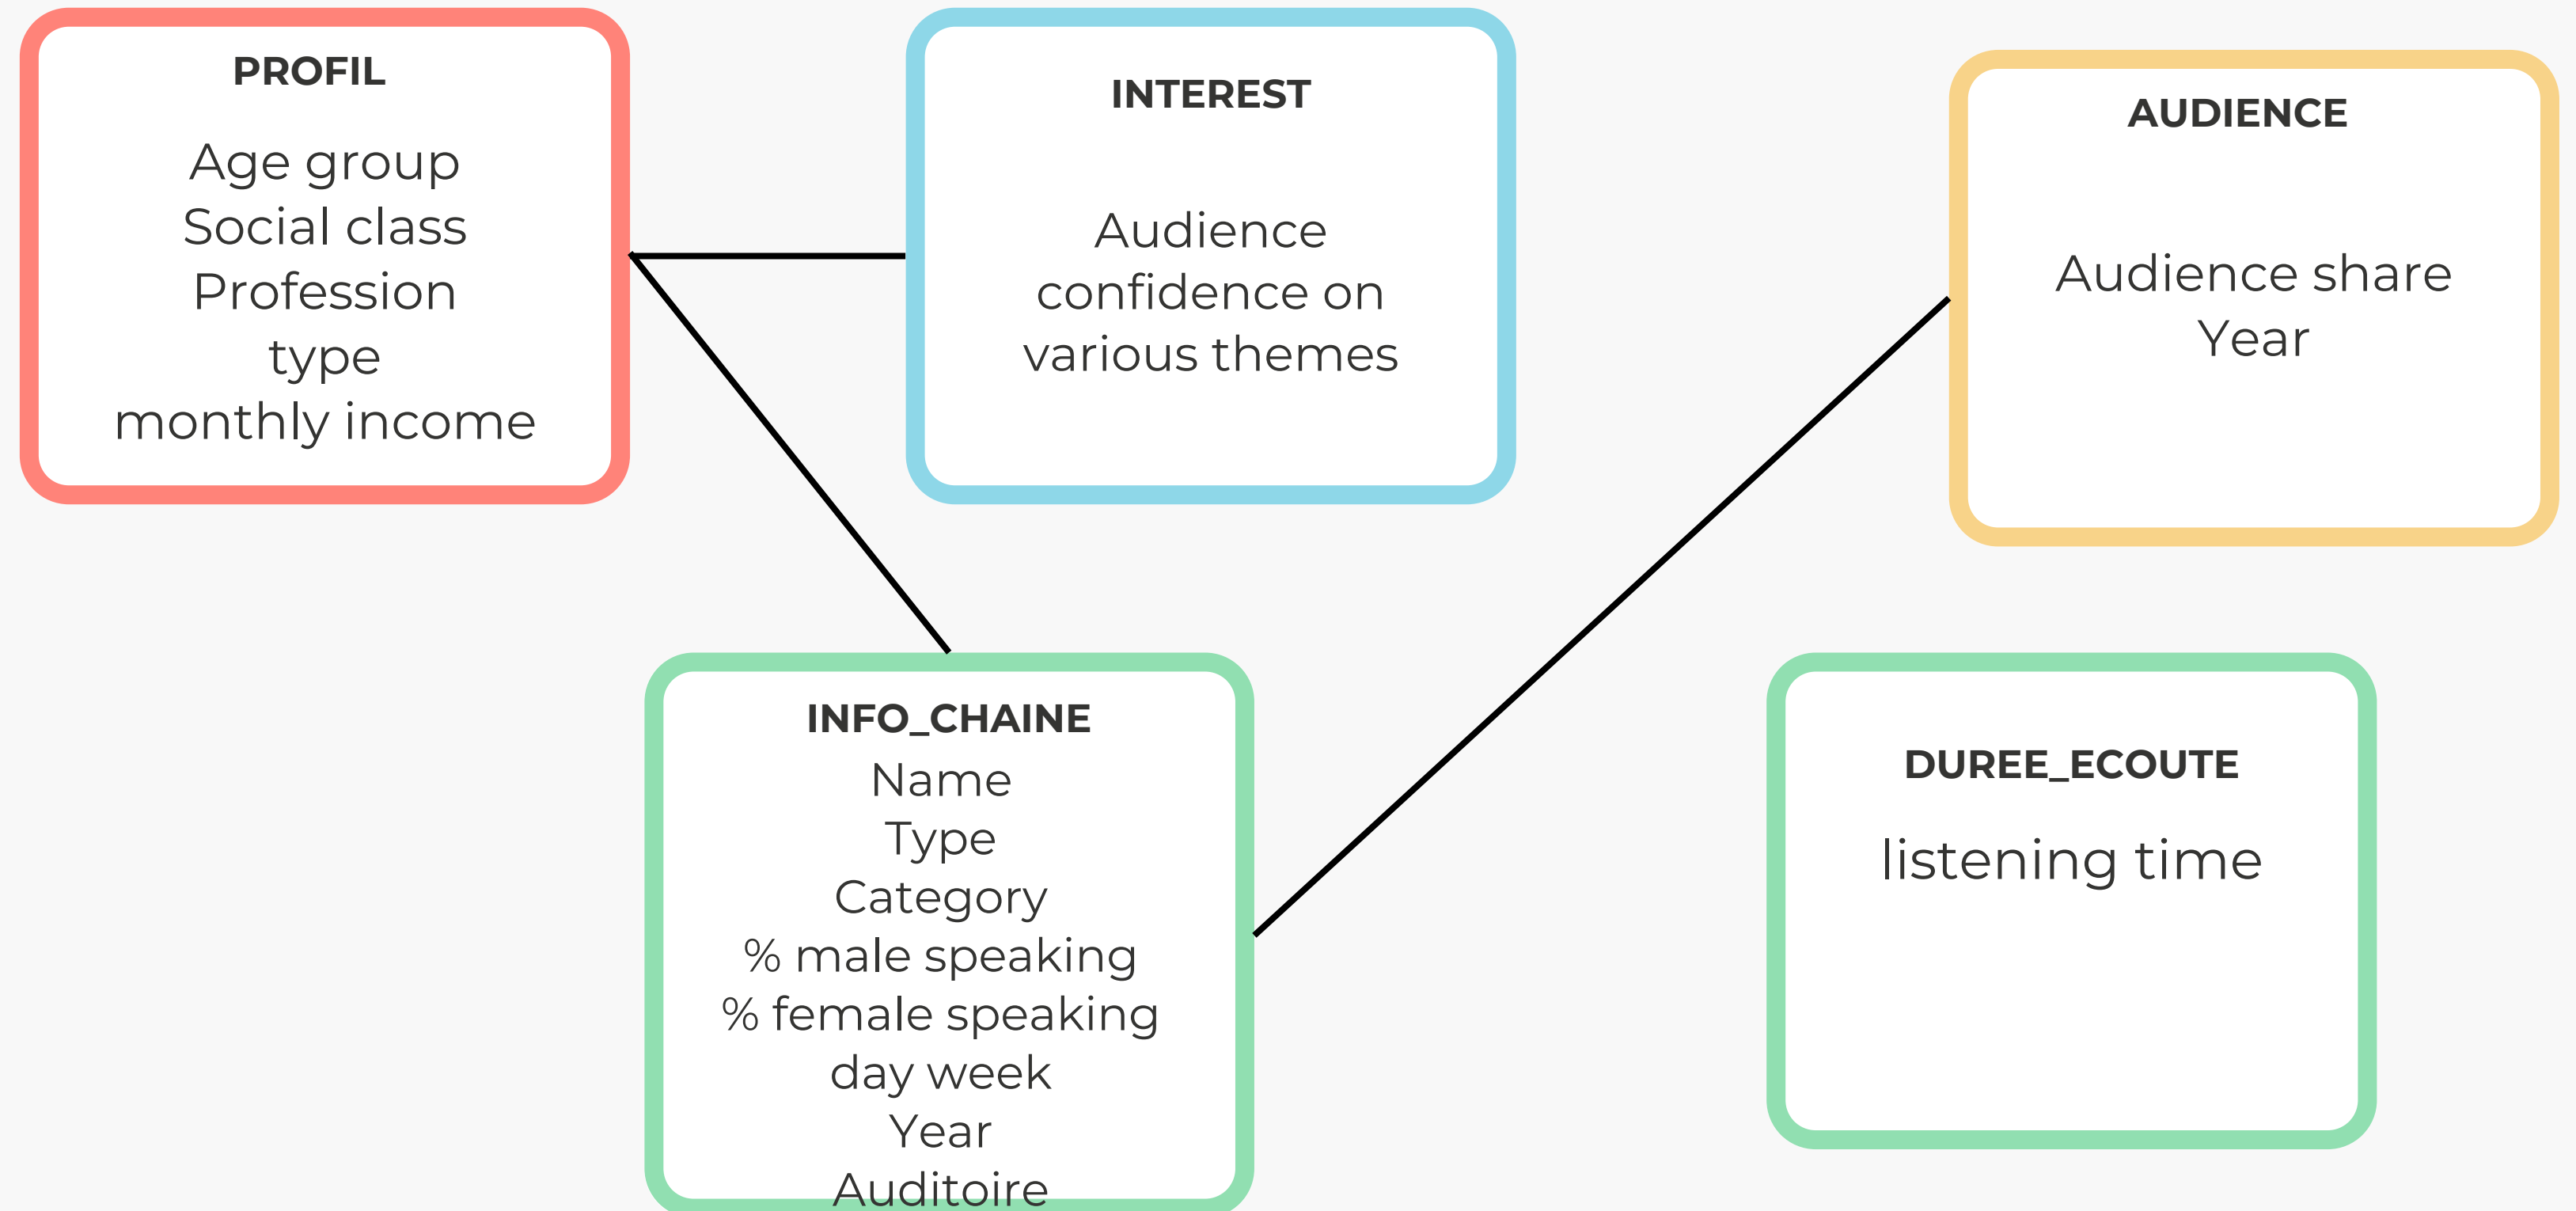

03 CORRELATIONS BETWEEN CHAINS

Calculation of the correlation matrix.

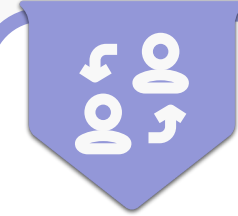

04

MERGE DATASETS

Group data on a common key: the channel (and sometimes the year).

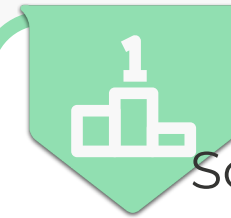

DIFFICULTIES ENCOUNTERED AND LIMITATIONS

Unclear or inconsistent variable labels

Some variables lacked proper definitions, others required cleaning

Misalignment with research goal

Some indicators were not directly aligned with the project's focus,

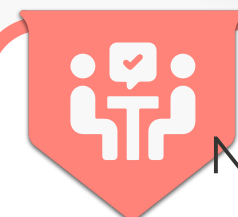

Inconsistent time references

Not all datasets covered the same years; some had missing 2019 or 2020 data.

Heterogeneous datasets

Different structures between datasets (media, genre) required manual joins.

No relational keys between files

No unique IDs to link media with genres, limiting advanced cross-analytics.
